SUMMARY

Software Developer with expertise in full-stack development, ERPNext customization, system integration, and business process automation. Passionate about building scalable software solutions that drive operational efficiency and digital transformation.

WORK EXPERIENCE

Software Developer

Jul 2026 – Present

Self Storage | Khobar, Saudi Arabia

- Developing and maintaining internal software solutions for self-storage operations.
- Working with ERPNext customization and business process automation.
- Collaborating with cross-functional teams to improve operational workflows.
- Supporting system integrations and digital transformation initiatives.

Home Automation Engineer Intern

Jul 2025 – Oct 2025

Al Rayah Company, Dammam

- Configured and programmed KNX systems using ETS and Vimar for lighting, AC, and shutters, ensuring correct device communication and automation logic.
- Helped test, troubleshoot, and integrate mobile control through the Vimar app across real projects.

PROJECTS

Personal Portfolio Website

- Built a responsive Next.js portfolio with TypeScript, Tailwind CSS, and smooth GSAP/Framer Motion animations.

Electronics Repair Services System (FYP)

- Built a Flutter + Firebase app for customers to track requests, chat with shops, and receive real-time notifications.

Grocery Delivery App

- Built a Flutter + Firebase grocery app with real-time Firestore data, OTP login, smart cart, and Arabic/English support.

ZATCA Phase 2 E-Invoicing Middleware

- Architected a Laravel system for ZATCA Phase 2, implementing UBL 2.1 XML generation, ECDSA signing, and TLV encoding from scratch.
